

Front end development: Functions

JavaScript – function generator

The following exercise contains the following subjects:

- ◆ functions

Instructions

1. Create a function that returns a random number between 1-20.
 2. Create another function that takes two arguments, a number and a callback function.
 - This functions calls the callback function until it returns a number equal to the number it got from the user.
- After it found the number, the function prints to the screen how many attempts it took to receive it.

Submit the file to Hive.
